

FATCAP — Ultra Premium Interactive Motion Studio Website

You are an elite Awwwards-level creative frontend engineer and motion systems architect.

Build an exceptionally cinematic, highly interactive, visually immersive landing experience for a motion and design studio called:

FATCAP

The final result should feel like:

- Awwwards Site of the Year
- Apple launch page smoothness
- Luxury fashion campaign interactions
- Experimental editorial web design
- Premium motion identity systems
- High-end creative development studio work

This is NOT a standard portfolio website.

This is a motion-driven digital experience where:

- scrolling is cinematic
- motion feels physically believable
- transitions feel handcrafted
- the logo becomes a living object
- the entire site feels immersive and responsive

The experience must combine the feeling of:

- Luxury Sunset
- Space Comet
- Leadify
- Smoothie Bowl
- Apple AirPods Max product page
- Modern motion identity systems

DO NOT make it feel:

- generic
- startup-like
- template-based
- over-cluttered

- AI-generated
- SaaS-oriented

The site should feel emotionally designed.

CORE EXPERIENCE

The entire website revolves around:

- smooth cinematic scrolling
- logo transformation
- layered depth
- shader backgrounds
- elegant glassmorphism
- immersive motion
- premium atmosphere
- motion-reactive elements

The entire homepage should feel alive.

TECH STACK (MANDATORY)

Use:

- React
- TypeScript
- Vite
- TailwindCSS
- GSAP
- GSAP ScrollTrigger
- Framer Motion
- Lenis smooth scroll
- React Bits
- React Three Fiber ONLY where subtle
- CSS variables
- GPU accelerated transforms

Use:

- requestAnimationFrame
- transform3d
- perspective
- preserve-3d
- will-change
- backface-visibility hidden

Everything must remain:

- 60fps+
 - high refresh rate optimized
 - cinematic
 - fluid
 - smooth on modern devices
-

MANDATORY REACT BITS INTEGRATION

Use React Bits heavily and elegantly.

Primary Background: <https://reactbits.dev/backgrounds/orb>

Use the Orb background:

- behind the hero
- subtle opacity
- cinematic movement
- slow atmospheric motion
- interactive depth feel

Additional React Bits effects:

- smooth text reveals
- magnetic buttons
- ambient mouse-reactive glow
- subtle animated gradients
- motion-based overlays

Do NOT overdo effects.

Everything should feel:

- restrained
 - elegant
 - premium
 - physically believable
-

VISUAL STYLE

Theme:

- Matte black

- Graphite grey
- Soft off-white
- Frosted translucent layers
- Subtle metallic lighting
- Soft ambient glow
- Glassmorphism
- Cinematic contrast

The atmosphere should feel:

- futuristic
- luxurious
- artistic
- immersive
- cinematic
- editorial

Add:

- film grain
- vignette
- ambient shadows
- subtle fog depth
- layered transparency
- reflective motion

Avoid:

- neon cyberpunk
- rainbow gradients
- cheap glow
- excessive blur
- startup visuals
- overcrowded layouts

LANDING HERO EXPERIENCE

The homepage opens with:

- a fullscreen cinematic hero
- Orb animated background
- floating FATCAP logo
- immersive depth
- subtle camera-like motion

NO standard hero layout.

NO generic headings.

NO boxed content.

The logo itself is the hero.

LOGO MOTION SYSTEM

The FATCAP logo begins:

- centered
- large
- crisp
- softly illuminated
- floating subtly
- gently breathing

The logo should feel:

- iconic
- premium
- sculptural
- cinematic

As the user scrolls:

The logo:

- scales down
- rotates smoothly
- moves upward
- moves backward in depth
- fades subtly
- transitions into the site's motion system

The transformation should feel:

- seamless
- cinematic
- physically smooth
- mathematically precise

NOT robotic.

NOT linear.

The motion should resemble:

- zero gravity movement
- camera dolly movement
- floating physical objects

Use:

- GSAP timelines
- ScrollTrigger scrub
- transform interpolation
- inertia
- velocity smoothing

The logo rotation must:

- continue seamlessly
 - never snap
 - never jitter
 - feel infinitely fluid
-

SCROLL SYSTEM

The entire experience depends on premium scroll feel.

MANDATORY: Use Lenis integrated properly with GSAP ticker.

Scrolling should feel:

- buttery
- luxurious
- weighty
- cinematic
- responsive

No:

- scroll lag
- stuttering
- desync
- layout shift
- abrupt transitions

Use:

- synced animation loops

- passive scroll listeners
 - proper cleanup
 - optimized transforms only
-

GLASSMORPHISM SYSTEM

Create elegant glass surfaces throughout the site.

Glass panels should:

- use backdrop blur
- have soft translucency
- subtle reflection
- layered depth
- dynamic lighting
- slight cursor interaction

Glassmorphism must feel:

- expensive
- minimal
- physically realistic

NOT overdone.

Add:

- soft edge highlights
 - subtle refraction feel
 - transparent layering
 - light diffusion
-

INTERACTIVE DEPTH SYSTEM

Add subtle:

- cursor parallax
- motion-based lighting
- hover depth
- magnetic interactions
- layered perspective

The site should feel responsive to the user's presence.

Every interaction should feel:

- tactile
 - smooth
 - premium
-

CINEMATIC SECTION TRANSITIONS

Each section transition should feel:

- immersive
- cinematic
- seamless
- atmospheric

Use:

- layered fades
- motion blur style easing
- parallax depth
- perspective shifts
- smooth opacity interpolation

Avoid:

- sharp cuts
 - abrupt reveals
 - cheap entrance animations
-

TYPOGRAPHY SYSTEM

Typography should feel:

- editorial
- oversized
- luxurious
- cinematic

Use fonts such as:

- Neue Montreal
- Satoshi
- General Sans
- Inter Tight

Typography treatment:

- strong hierarchy
- large spacing
- minimal copy
- cinematic alignment

Avoid:

- excessive paragraphs
 - startup marketing copy
 - cluttered UI
-

ADVANCED MOTION REQUIREMENTS

ALL animations MUST:

- use transforms + opacity only
- avoid layout recalculations
- use hardware acceleration
- maintain high FPS
- use handcrafted easing

Motion should feel:

- physically believable
- premium
- intentional
- handcrafted

Use easing similar to:

- power4.out
 - expo.out
 - custom cubic-bezier curves
 - inertial interpolation
-

SHADER / DEPTH FEEL

Use subtle shader-inspired depth.

Optional:

- WebGL distortion
- subtle shader displacement

- cinematic light falloff
- atmospheric noise
- floating particles

ONLY if subtle.

Never overpower the content.

RESPONSIVENESS

The site must feel exceptional on:

- desktop
- laptop
- tablet
- mobile

Mobile should preserve:

- cinematic motion
- premium feel
- smooth performance

Optimize:

- heavy effects
 - motion intensity
 - rendering cost
-

PERFORMANCE REQUIREMENTS

MANDATORY:

- production-ready architecture
- optimized rendering
- minimal re-renders
- lazy loading where needed
- smooth GPU compositing
- high-performance animation loops

Use:

- useMemo
- useCallback
- proper cleanup

- animation separation
 - modular motion utilities
-

PROJECT STRUCTURE

Use:

- components/
- animations/
- hooks/
- sections/
- shaders/
- lib/
- styles/

Create reusable:

- motion hooks
 - animation utilities
 - smooth scroll systems
 - glass components
 - shader wrappers
-

DELIVERABLES

Generate: 1. Full React + TypeScript implementation 2. TailwindCSS styling 3. GSAP + ScrollTrigger integration 4. Lenis smooth scrolling setup 5. React Bits Orb background integration 6. Cinematic logo animation system 7. Glassmorphism components 8. Motion utility architecture 9. Responsive behavior 10. Production-ready structure 11. High-end cinematic interactions 12. Scroll-driven motion system 13. GPU optimized transforms 14. Ambient lighting layers 15. Cursor-reactive interactions

The final experience should feel like:

“A futuristic luxury motion identity website for a world-class creative studio — blending cinematic motion, immersive scrolling, premium glassmorphism, and handcrafted interaction design.”
